

Tic tac toe widget write-up

I feel that for a planner app one should be able to also have fun while planning how to tackle a busy day week or month ahead. So I chose to add the tic tac toe game which is simple enough and easily implemented into a react app.

The Tic Tac Toe widget is a React component that manages the game state, handles player clicks, determines the winner, and provides a reset option. It renders the game board, current player status, and a reset button.
